

ATTENTION

IMPORTANT INFORMATION

Although the TNT (Dinghy Lift) is designed to lift from 1,500 to 2,000 pounds, depending on the system, fiberglass transoms on yachts are engineered to accommodate only so much weight. For this reason, the following warning must be complied with. Exceeding the recommended weights for your size vessel can affect or void your Factory Warranty and/or put your transom at risk. Furthermore, exceeding these stated limits can adversely affect the performance of your boat.

MAXIMUM TENDER & P.W.C. CAPACITIES

33' TO 39'	500 Pounds (Gross Weight)
40' TO 48'	650 Pounds (Gross Weight)
49' TO 58"	700 Pounds (Gross Weight)
59' TO 68'	850 Pounds (Gross Weight)

69' and Above Quoted Individually

Sailboat weight limit is 1,000 Pounds (Gross Weight)

The above weights are suggested gross wet weights. Overall length of the tender must not exceed the length of your platform.

Please sign and return with the purchase agreement and warranty information.
